Dear recruiter from Millennium,

My name is Chia-En Lu, or you could call me Allen. I am a first-year student pursuing a Master's degree in computer science at the University of California - San Diego. Previously, I graduated from National Tsing Hua University with a Bachelor of Science degree in computer science. Before my undergraduate degree, I participated in competitive math, where I was awarded silver in the Taiwan Regional Math League. I was recently introduced to your company via LinkedIn and was very impressed with what I learned about your company. I am not just interested, but truly excited about the possibility of pursuing an internship at your company and have submitted an application enclosing this cover letter.

During my internship at Taiwan AI Labs, I served as a Machine Learning Software Engineer Intern. This role allowed me to adapt to various challenges and learn how to solve real-world problems using machine learning. I have honed my ability to examine large amounts of data, find relations between the data, and propose solutions addressing such issues. This work is deployed in a hospital, serving the people in need. I have also developed strong skills in C++/Python and gained knowledge in Natural Language Processing(NLP).

I also completed a full-time research assistant role in Academia Sinica, the top research institute in Taiwan. I designed a large-scale query system for knowledge graphs. This allows users to query information and find relations between entries quickly and accurately. I have gained experience in how to build large-scale systems and deploy them in the real world. Throughout the discussions with company representatives and co-workers, I also honed my communication skills and ability to work as a team.

Given my computer science and math background, I believe I am a perfect fit for the role. I can bring immense value to the company while improving individually. I look forward to joining and contributing to your company.

Sincerely, Chia-En Lu
